Six Degrees of Social Influence Douglas T. Kenrick 2012-02-10 Over the course of the last four decades, Robert Cialdini's work has helped spark an intellectual revolution in which social psychological ideas have become increasingly influential. The concepts presented in his book, *Influence: The Psychology of Persuasion*, have spread well beyond the geographic boundaries of North America and beyond the field of academic social psychology into the areas of business, health, and politics. In this book, leading authors, who represent many different countries and disciplines, explore new developments and the widespread impact of Cialdini's work in research areas ranging from persuasion strategy and social engineering to help-seeking and decision-making. Among the many topics covered, the authors discuss how people underestimate the influence of others, how a former computer hacker used social engineering to gain access to highly confidential computer codes, and how biology and evolution figure into the principles of influence. The authors break new ground in the study of influence.

*Pre-Suasion* Robert Cialdini 2016-09-06 The acclaimed New York Times and Wall Street Journal bestseller from Robert Cialdini—"the foremost expert on effective persuasion" (Harvard Business Review)—explains how it's not necessarily the message itself that changes minds, but the key moment before you deliver that message. What separates effective communicators from truly successful persuaders? With the same rigorous scientific research and accessibility that made his *Influence* an iconic bestseller, Robert Cialdini explains how to prepare people to be receptive to a message before they experience it. Optimal persuasion is achieved only through optimal pre-suasion. In other words, to change "minds" a pre-suader must also change "states of mind." Named a "Best Business Books of 2016" by the Financial Times, and "compelling" by The Wall Street Journal, Cialdini's *Pre-Suasion* draws on his extensive experience as the most cited social psychologist of our time and explains the techniques a person should implement to become a master persuader. Altering a listener's attitudes, beliefs, or experiences isn't necessary, says Cialdini—all that's required is for a communicator to redirect the audience's focus of attention before a relevant action. From studies on advertising imagery to treating opiate addiction, from the annual letters of Berkshire Hathaway to the annals of history, Cialdini outlines the specific techniques you can use on online marketing campaigns and even effective wartime propaganda. He illustrates how the artful diversion of attention leads to successful pre-suasion and gets your targeted audience primed and ready to say, "Yes." His book is "an essential tool for anyone serious about science based

business strategies...and is destined to be an instant classic. It belongs on the shelf of anyone in business, from the CEO to the newest salesperson" (Forbes).

Trust Us, We're Experts PA Sheldon Rampton 2002-01-14 The authors of Toxic Sludge Is Good for You! unmask the sneaky and widespread methods industry uses to influence opinion through bogus experts, doctored data, and manufactured facts. We count on the experts. We count on them to tell us who to vote for, what to eat, how to raise our children. We watch them on TV, listen to them on the radio, read their opinions in magazine and newspaper articles and letters to the editor. We trust them to tell us what to think, because there's too much information out there and not enough hours in a day to sort it all out. We should stop trusting them right this second. In their new book Trust Us, We're Experts!: How Industry Manipulates Science and Gambles with Your Future, Sheldon Rampton and John Stauber, authors of Toxic Sludge Is Good For You, offer a chilling exposé on the manufacturing of "independent experts." Public relations firms and corporations know well how to exploit your trust to get you to buy what they have to sell: Let you hear it from a neutral third party, like a professor or a pediatrician or a soccer mom or a watchdog group. The problem is, these third parties are usually anything but neutral. They have been handpicked, cultivated, and meticulously packaged in order to make you believe what they have to

say—preferably in an "objective" format like a news show or a letter to the editor. And in some cases, they have been paid handsomely for their "opinions." For example: You think that nonprofit organizations just give away their stamps of approval on products? Bristol-Myers Squibb paid \$600,000 to the American Heart Association for the right to display AHA's name and logo in ads for its cholesterol-lowering drug Pravachol. SmithKline Beecham paid the American Cancer Society \$1 million for the right to use its logo in ads for Beecham's Nicoderm CQ and Nicorette anti-smoking ads. You think that a study out of a prestigious university is completely unbiased? In 1997, Georgetown University's Credit Research Center issued a study which concluded that many debtors are using bankruptcy as an excuse to wriggle out of their obligations to creditors. Former U.S. Treasury Secretary Lloyd Bentsen cited the study in a Washington Times column and advocated for changes in federal law to make it harder for consumers to file for bankruptcy relief. What Bentsen failed to mention was that the Credit Research Center is funded in its entirety by credit card companies, banks, retailers, and others in the credit industry; that the study itself was produced with a \$100,000 grant from VISA USA, Inc. and MasterCard International; and that Bentsen himself had been hired to work as a credit-industry lobbyist. You think that all grassroots organizations are truly grassroots? In 1993, a group called Mothers Opposing Pollution (MOP) appeared, calling itself "the largest women's environmental group in Australia, with thousands of supporters across the country." Their cause: A campaign against plastic milk bottles. It turned out that the group's spokesperson, Alana Maloney, was in truth a woman named Janet Rundle, the business partner of a man who did P.R. for the Association of Liquidpaperboard Carton Manufacturers—the makers of paper milk cartons. You think that if a scientist says so, it must be true? In the early 1990s, tobacco companies secretly paid thirteen scientists a total of \$156,000 to write a few letters to influential medical journals. One biostatistician received \$10,000 for writing a single, eight-paragraph letter that was published in the Journal of the American Medical Association. A cancer researcher received \$20,137 for writing four letters and an opinion piece to the Lancet, the Journal of the National Cancer Institute, and The Wall Street Journal. Rampton and Sta...

Strengthening Forensic Science in the United States National Research Council 2009-07-29 Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.
